The Clinical Immunology and Allergy Residency Training program at McMaster is dedicated to fostering knowledgeable, skilled and passionate clinicians in our field.

Our program is unique in that it integrates pediatric and adult training. Trainees are exposed to a wide variety of clinical areas during their training, with graded levels of autonomy.

We work closely with our colleagues in rheumatology, respirology and dermatology to provide an integrated learning environment with exposure to world-renowned clinicians and researchers. The trainees have opportunities to pursue both basic and applied immunology research, with mentorship available in a wide variety of research areas. The flexible curriculum allows the resident to tailor their program experience to meet their needs and future career goals.

Resident teaching integrates weekly expert grand rounds with resident driven clinical and basic immunology topics. The residents are involved in educating our colleagues in General Internal Medicine and Pediatrics about our specialty in monthly teaching rounds. In doing this they are able to promote our specialty to those in the process of delineating their career path.

Trainees Accepted Each Year
up to 3

Duration of Fellowship
2 years

Number of Graduates Last 5 Years and Subsequent Career Choice
6 (2 practice, 4 research-academic)
